Approach s60 vs s60 premium

The Garmin S40 vs S60 debate is a common one when looking for a golf GPS watch. We want accurate info and we don't need extra features that we won't use. It's a toss-up between features and price. Are the features worth the extra cash? Is the extra cash such a worry long term? What's the reason i'm buying this thing? Is my wife going to still talk to me when it arrives in the mail?I know, I had the same thoughts before I settled on the Garmin S40 when comparing the two and below, I'll do a comparison review between the Garmin Approach S40 and S60.The flagship watch for Garmin has been the S40 for a long time.The Approach S40 has a 1.2" diameter color TOUCHSCREEN display. It's full color and provides distances to the back, middle and front of the greens on the default screen when you're out on the course. When you first get the watch, you have to set some basic information about the distances you hit so the watch will know what to suggest when tracking your swings. Yep! The watch tracks when you hit the ball via the feedback of the jarring nature of hitting a ball.By preprogramming your distances, after your shot, the watch will ask which club you hit, trying to match the closest one to your distance you had to the green. This is amazing tech and it's always within 1 club up or down from what i actually hit. When you play, it will automatically select the course you're closest to via the satellite system, with some other courses listed nearby. You select your course and get going.You get the option of keeping score and this also tracks fairways, which side of the fairway you missed, if you hit the green, number of putts and penalties. The watch does not show you the overall layout of the hole, but only the green shape. You can click and drag the pin to wherever it is on the green, using the touch screen on the watch. It provides carry over bunkers, and the distance to the 100, 150, 200 yard layups which is incredibly valuable info.The watch will last 3 rounds on a full charge as it's never below 75% after one round of use. I have never used it without charging, as I charge it after every round.The entire watch including the silicone band doesn't weight much and it isn't very bulky so it won't interfere with your swing. I hate wearing jewellery and it does not bother me one bit while swinging. You can look back at your performance and stats after the round via the phone app. The watch automatically records your swings, you input the details on the course, and when keeping score, the phone holds the info until you transfer it to the phone using the VERY easy to use app. Check out the S40 current price THE GARMIN APPROACH S60 FEATURESThe Garmin Approach S60 is the same size as the S40. But the biggest difference is that the course maps on the S60 Garmin have aerial shots of the holes you're playing. On the S40, you only have a very flat drawing with some arrows to push to get to different readings to those hazards.The full color aerial view of the holes means you can see the shape of the hole, and you can use the same click and drag with your finger, to move your target point on the map. This allows you to know distances to literally anywhere you want on the given map. You can only do this on the green in the S40 version.The S60 watch also compensates for slope when considering the distances to your selected areas. There are more features geared toward other sports in the S60 which i didn't really care much about, but maybe you do participate in these and they may be helpful for you.The reason I did not get the the S60 may help you decide:I use a rangefinder already. I prefer a rangefinder for truly accurate distances. I wanted a watch that would keep track of my club distances automatically and store my scores and stats. I use the front middle and back of the green distances to know how much green I have to work with on approaches. I don't need aerial views of the holes and even the touch and drag nature of the green view isn't important to me. I play off a low handicap and also do not use fitness watches.If i did not have a rangefinder, and wanted a truly full-function golf watch, I would buy the S60. I would use the aerial view of the holes, and pinpoint distances to things on the course. I knew I wouldn't need these features and I don't like needing to charge things all the time because I forget. The S60 lasts a lot shorter with the battery life in golf mode and I don't want to feel pressured if I forgot to charge it once. I needed low maintenance vibes. If I were a fitness guru, I would also take the S60. Check for S60 current prices The S40 and the S60 are both fantastic - they're just for different people. It depends on what you want it for.The Garmin Approach S40 recommended for you iff you're like me and want to keep track of your club distances, and know a few things like distances to 100, 150 and 200 yard layups but at the same time you use a rangefinder, then the S40 is a way better purchase. You can use the basic front, middle and back of the green measurements to get around, especially if you're a double digit handicapper. The S40 is low maintenance because you only have to charge it every 2-3 rounds and it doesn't have all sorts of other fancy fitness and sports features that you'll never use. Bloat. It was not about the money as I could have afforded either. It was about simplifying my life while adding complications.The Garmin Approach S60 recommended for you iff I'd recommend the Garmin Approach S60 to the player who wants to exclusively use the GPS watch for their distances. I mean, no rangefinder. If you have a rangefinder, the S60 will just be a higher maintenance stats-tracker.But if you don't use a rangefinder and want quick reference to the front, middle and back of the green, as well as being able to work out exactly how far it is to specific locations on the course, the S60 is perfect for you. Spend the extra cash that you wouldn't spend on the rangefinder if you are looking for a distance finder. You'll have to keep it fully charged after every round.Also, if you're a fitness nut as well as a golfer, you'll prefer the S60.Is the S60 worth the 20-25% higher price?If you want aerial views of the holes and drag and drop targeting on any area of the course, yes. If you want to track fitness markers and are into that, then yes.But if you want to use it purely for middle, back and front of green measurements, and track your club distances, and scores, then no, the S40 is a lower maintenance, less charging, easier device. If you own a rangefinder already, and use it a lot, the S40 will not add anything to your life except stats tracking.Is it uncomfortable to wear and swing?I do not wear jewellery and I have no problem and don't notice it after the first ever hole of wearing it.How long does the battery last? The Garmin S60 will last 30 holes and in smartwatch mode, it will last 10 days. The S40 lasts 54 holes and 10 days in smartwatch mode.What if you sweat? Won't it destroy the charging port?That is exactly what I wondered about, and so far after a good 20-30 usages, there is no effect on the charging, despite sweating profusely in eh tropical heat.How long to charge the battery?I have never measured, but I just leave it on overnight. Easy life. Garmin Approach S60 Premium Golf Watch The Golf Clearance Outlet is committed to providing the most efficient solution to dispatching your orders as soon as possible. We aim to dispatch orders within 24 - 36 hours after receiving the order providing all stock is available. You will receive an email once your order has been dispatched; this will provide you with tracking details and an estimated delivery date. To assist us in getting your orders to you as quickly as possible we ship via Star Track Express, Australia Post eParcel, TOLL IPEC, Fastway Couriers and Couriers Please. Check out our 5 star reviews on the Homepage of our Website. The thing is Australia is BIG, and a few parts are hard to get to, it may take a little longer than we would like. Refer to your tracking details to keep updated on when you can expect your order. The Golf Clearance Outlet offers Free Delivery on orders over \$30.00 *Please Note In some instances where delivery is to a remote area this might not apply. We will be in touch if that is the case with your order. On occasions where a product may be temporarily out of stock, the customer will be contacted by telephone, email or letter within their order with further information. For further delivery enquiries please email Before Garmin created golf GPS smartwatches, their golf product line was heavily focused on promoting golf handheld devices. These handhelds were bulky and sometimes inconvenient to carry around, yet the available features were a hit with golfers. Now, with the Garmin Approach S60 and the S60 Premium, golfers can get all the features that made the handhelds such a hit in the form of compact and smart GPS golf watches. But which of these advanced GPS golf watches should you buy? The Garmin Approach S60 and the Garmin Approach S60 Premium are virtually identical golf smartwatches in terms of features and capabilities. The S60 Premium is more expensive than the standard Approach S60 and the only difference is an included leather strap and resistant scratch-proof glass. Both of these golf smartwatches score high marks in all the essential key points for rating a golf GPS watch. This article will explore everything that needs to be known about both products, with a specific emphasis on what makes the watches different from one another. Read on to find out more and discover which is better suited to your needs. Garmin Approach S60 Review Much like golf, technology is a field that is ever-expanding. Sports devices are constantly evolving to make a sport like golf easier to keep track of in terms of performance and analysis to track improvements. The Garmin Approach S60 has a decent display size that makes tracking a round of golf easier and more clear to read. Much like the watches that came before it, the S60 has superb functionality that allows you to easily load the required information from golf courses in practically no time at all. Yardages are also perfectly captured in the innovation of the watch; front, center, and back are all brought to life with easy-to-read graphics for expert tracking. The battery life of the S60 is also strong and long-lasting. Two rounds of golf can typically play out on just one charge that lasts about 10 hours. Let's take a closer look at some of the features that set the Garmin Approach S60 apart from many of its predecessors in the Garmin line. Pros: Expert mapping features. The mapping features on the Approach S60 are simply incredible in terms of the functionality this watch brings to golf-specific mapping. You can zoom into a hole on the course maps and easily see variations in distance and activity tracking to decide what bunkers or water hazards need to be cleared. This is a much-needed functionality for an advanced GPS golf watch and the ability to track a shot with precision is one of the features that truly make this watch stand out. Expert sensors. The S60 has built-in sensors that can automatically detect when you take a shot and can even help you in deciding how to better your swing tempo. Pin positioning targeting. The Approach S60 can provide a means to increase shot tracking to pinpoint where on the green you can swing to get more accurate yardage. Performance tracking. One of the most beneficial attributes of the S60 is the watch's ability to track your distance in terms of steps taking and calories burned. Because it feels good to know that playing a game you love is actually good for your health. Cons: Expensive. It goes without saying that likely already know that the Approach S60 is an expensive watch. Even though the watch is known for its price, the price tag is quite substantial, therefore, you have to weigh your options if the price of the S60 Standard is worth it. Garmin Approach S60 Premium Review The Garmin Approach S60 Premium is virtually identical to the S60 Standard, therefore, it can become a difficult task to do a proper Garmin S60 vs S60 Premium comparison. There are only a few slight differences between the two watches to be aware of. In terms of functionality, the two watches are identical; you will not find new features with the S60 Premium that were not already programmed into the S60 Standard. Apart from a couple of additions which we describe below, the only thing that can be said to distinguish the two watches from one another is that the S60 Premium has a slightly more durable quality when compared to the S60 Standard. Pros: Ceramic bezel. The major difference that separates the two watches is the scratch-resistant ceramic bezel of the S60 Premium. This bezel makes for a powerful and long-lasting watch face that is sure to hold up better than the watch face of most golf smartwatches. Leather Strap. The Garmin Approach S60 Premium comes with a leather band that is more durable than other ceramic bands. Cons: Needlessly expensive. The major downside of the S60 Premium is that this watch is more expensive than the S60 Standard for virtually no major differences to be found between the two models. What Is the Difference Between the Garmin Approach S60 and S60 Premium? Both of these models are nearly identical to one another. Both watches have different colors to choose from, are superior in providing data resolution for green view, and sunlight readable. Both feature a large library of preloaded courses that cover a wide range of tracking features for the preloaded courses that best suit the game you are playing. Garmin Connect is easy to use with both watches and both watches are compatible with Garmin Connect functionality. It can be said that the S60 Standard is essentially the only version of the S60 since there are no functional differences between this model and the S60 Premium. Since golf is a physical sport, many users find that the addition of performance tracking features that measure health statistics are a much needed new feature when it comes to golf smartwatches, and both the S60 Garmin Approach and the S60 Premium feature this addition that was included on the S60 Standard. In terms of visibility, it can be said that the S60 Premium is also a bit easier to see due to it being more sunlight-readable than even the ceramic-based visual patterns that can create a glare in the sunlight. In fact, the only real differences between the two watches are found in the design. In terms of design, the S60 Standard is made from a polymer bezel whereas the S60 Premium is made from a reinforced ceramic bezel. This can be an important difference since the S60 Standard does have a tendency to scratch easily if you drop it or brush it against abrasive materials. Ceramic just holds up better in these situations than what you can expect with a bezel made of polymer. The final difference is simply related to the watch band: the S60 Standard has a silicone-based watch band and the S60 Premium has a leather watch band. Both of these materials are durable, yet the leather band of the S60 Premium has a bit more of a fashionable quality. Hardware Comparison Should You Buy the Garmin Approach S60 or S60 Premium? Determining which of these watches to buy is simply a matter of taste. Everything you get with S60 standard model is available on the S60 Premium, and the S60 standard model is one of the best Garmin golf smartwatches. If you want to add a bit of style to the watch, it is certainly feasible to go with the Premium version of the S60. The leather band is sure to hold up for a long time, and the scratch-resistant ceramic bezel only increases the durability of the watch for long term use. The only downside is that the S60 Premium is about 100 dollars more expensive than the regular Garmin S60. For this price, you are getting a slightly more durable bezel and a leather band. Some users report that the S60 Premium has improved visibility over the Garmin S60, but this is mostly a matter of personal preference. We say to go all out and go with the S60 Premium. The scratch-resistant bezel is certainly a good quality to have for a smartwatch while on the golf course. Golf Features Comparison Are These Premium Golf Watches Worth the Money? No matter which of the two versions you ultimately decide to purchase, both models are certainly worth the price. The features are just too innovative and useful to pass up. The biggest problem consumers frequently have is deciding if the S60 Premium is really worth the extra price. We struggled with this decision as well since there are no functional differences that can be found between the two watches. No matter which watches you purchase, the decision to buy the S60 will make your golf game so much more involved and easy to keep track of. The S60 Premium is the overall best decision due to the scratch-resistant bezel. FAQs The Garmin Approach S62 (see on Amazon) is a recent upgrade to the Garmin Approach S60. The S62 has a larger build than the S60 and a much stronger and more clear pixel resolution than what is seen with the Approach S60. Unfortunately, there is no heart rate sensor or customizable heart rate monitor that comes with the Garmin Approach S60. With that in mind, there are many different performance tracking features that are available with the Garmin Approach S60 with many that can track activities beyond golf if you use the Garmin Connect App. Final Thoughts With all of these similarities and differences in mind, you may notice that both watches are far too similar to make a final choice. The best way to make the decision is to remember what each smartwatch is geared towards. The S60 standard has all of the features that you can find with the S60 Premium.
